

PROBLEM

Excessive Wear On Conveyor Pulleys Resulting In Premature Failure

CCI
Conveyor Pulleys

SOLUTION - *The CCI Quarry Duty "AR" Wing Pulley.*

Designed for rugged applications where extended life is essential, the "AR" wing is our original wing pulley constructed with "AR400" abrasive resistant steel contact bars.

The 3/4" thick, 2" wide contact bars provide unsurpassed strength. The wings, a minimum of 1/2" thick, provide additional protection against folding and premature failure.

The Quarry Duty "AR" Wing Pulley also features CCI's unique "end-pipe" design which reduces wing height creating an even higher level of protection against wing folding.

For highly abrasive conditions where other pulleys fail, the Quarry Duty "AR" Wing Pulley is the solution.
