

CCI

Conveyor Pulleys

CCI designs its Wing Pulleys to meet the three most common modes of failure;

- wing folding
- premature contact bar wear
- hub weld fatigue.

The CCI Wing Pulley performs so well in the harshest, most rugged conditions that our competitor's have tried to imitate our aggressive design.

Available in standard, heavy, mine, quarry duty and quarry duty "AR" construction, CCI can ship this product immediately.

Our aggressive construction has earned CCI a reputation as the best in the business.

AGAB

PULLEYS • HUBS • LAGGING • SHAFTING • BEARINGS • TU FRAMES • DRIVES
