

# CCI Conveyor Pulleys

The **CCI** Quarry Duty "AR" Wing Pulley is specifically designed for the most rugged applications where extended life is essential. The "AR" Wing is constructed with "AR400" abrasive resistant steel contact bars, where the belt rides on the pulley.

The contact bars are 3/4" thick by 2" wide, providing unsurpassed strength. The wings are a minimum 1/2" thick and provide additional protection against wing folding and premature failure.

The **CCI** "AR" Wing Pulley also features our unique "end-pipe" design, which reduces wing height and provides another level of protection against wing folding.

The **CCI** Quarry Duty "AR" Wing Pulley is a natural candidate for primary conveyor tail sections, surge pile tail sections and "hard to reach" positions.

**CCI has the ultimate wing pulley design to fit any application.**
