

CCI

Conveyor Pulleys

CCI has once again introduced a unique pulley offering maximum protection against premature failure in harsh applications. the "DSP" Dead Shaft Pulley features integral bearings, heavy duty fabricated steel mounting blocks and CCI's standard aggressive features found in all of our other pulley products.

Each pulley features a standard "off-the-shelf" piloted flange cartridge, easily interchangeable with several other manufacturers brands. Each bearing also utilizes a special duty seal, offering maximum protection against contaminant's.

CCI manufactures each DSP pulley with an over-sized shaft behind the bearings to help combat deflection. The shaft is journaled to slip into fabricated pedestals which bolt into the same dimensions as conventional pillow blocks.

PULLEYS • HUBS • LAGGING • SHAFTING • BEARINGS • TU FRAMES • DRIVES

The CCI "DSP" Dead Shaft Pulley

- Aggressive Construction
- Standard "off-the-shelf" Integral Bearing (Piloted Flange Cartridge)
- 3/4" Thick Fabricated Steel Mounting Pedestals
- Increased Diameter Shafting Behind Bearings to Reduce Deflection
- Available in Standard Duty, Mine Duty, Quarry Duty & Quarry Duty AR
- Wing & Drum Style Available
