

# CCI Conveyor Pulleys

CCI has developed a new pulley designed exclusively for extreme applications. We call it the "Eliminator"; it will eliminate your tail pulley headaches.

This unique pulley design is superb for high tension conveyors where limited space in the tail position prevents a conventional hub and bushing mounting to the shaft. The Eliminator tail pulley features minimum 1" thick wings welded radially around a large diameter hot roll machined shaft. The hot roll shaft is turned down outside the pulley for bearing mounting. Each wing is further supported by gussetts which are positioned for optimal cleaning action and stability.

The Eliminator can be shipped as either "Flat" or "Crowned" profile with our standard quick delivery.

PULLE

## CCI's ultimate answer to high tension applications: The Eliminator.

Extra high load capacity

1" thick wings

Extra thick gussetts for superior stability  
and increased cleaning action

Solid welded construction

Outstanding deliveries available

Excellent for coal mining applications  
or anywhere space is limited
