

CCI Conveyor Pulleys

The **CCI** Spiral Wing Pulley is designed specifically for the ultimate cleaning action in conveyor applications the build-up of material build up is a problem.

The **CCI** Spiral Wing offers the same aggressive construction as our other self cleaning wing pulleys, and includes a reverse helix spiral wrap to clean the belt.

Unlike our competitors, we apply the wrap with heavy welds over the contact bars found on our standard wing pulleys. This provides for superior adhesion of the wrap to the pulley.

CCI Spiral Wing Pulleys are offered in standard, heavy, mine and quarry duty construction, with quick deliveries available.

At CCI, exceeding industry standards is our specialty.

AGAB

PULLEYS • HUBS • LAGGING • SHAFTING • BEARINGS • TU FRAMES • DRIVES

Behind CCI's superior design and construction is the fastest service in the business.

Reverse Helixes wrapped around the outer diameter of the pulley.

Pulley Flat Bar is under the Spiral Wrap for additional protection.

Larger welds provide a better bond between the wrap and pulley over competitors, who weld the wrap directly to the wing.

This design creates a "screw conveyor" cleaning action, removing material from the belt.
