## Conveyor Pulleys

**CCI** Machined Drum Pulleys are manufactured from thick wall pipe or tubing, then machined on a lathe to form the crown and insure minimum runout in operation.

**CCI** Machined Drum Pulleys are the heaviest in the business, featuring 3/4" thick integral hub end discs, minimum 1/4" rims and 1/4" center plates. Because each pulley has been machined, the pulley is the thickest in the center where the load is the highest.

Our Machined Drum Pulleys run truer than competitors' pulleys made by the "expansion" method. This insures a better tracking belt and less vibration transferred to the bearings.

**CCI's Machined Drum Pulleys are the heaviest in the business.**

PULLEYS • HUBS • LAGGING • SHAFTING • BEARINGS • TU FRAMES • DRIVES

**Regardless of the application in small diameter drum pulleys, CCI has the answer!**

3-1/2" to 10-3/4" Diameter

Manufactured from Heavy Wall Pipe or Tubing

Crowned Face or Flat Face

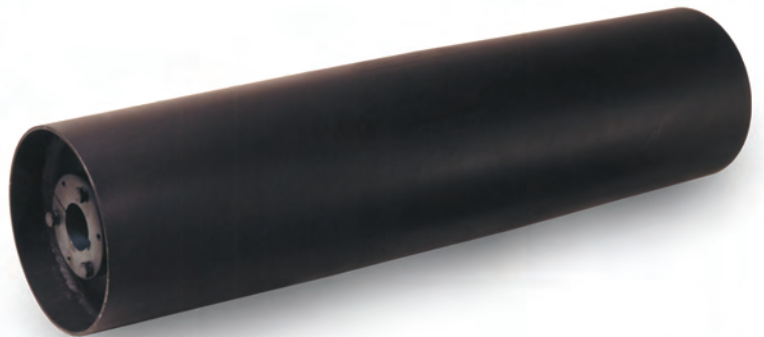

Several Hub/Bushing Systems Available

Machined OD's for Better Belt Tracking and less vibration

Quick Deliveries
