

CCI

Conveyor Pulleys

CCI V-Guide Drum Pulleys are manufactured from thick wall tubing and built around a v-guide insert. The finished product is then machined on a lathe to insure minimum runout and consistent quality.

CCI V-Guide Drum Pulleys are the heaviest in the business, featuring 3/4" thick integral hub end discs, 1/4" rims and center plates. Each v-guide insert is CNC machined from a minimum 1" thick tube and allows us to custom build each per customer specified lengths.

Our emphasis is once again based on a heavy construction design and a short lead time. With our aggressive construction and a full inventory of A, B, and C groove inserts we can deliver a heavy pulley with our standard **CCI** quick delivery.

CCI V-Guide rollers are available with A,B, and C groove inserts.

ADAC

PULLEYS • HUBS • LAGGING • SHAFTING • BEARINGS • TU FRAMES • DRIVES

CCI is now offering quick deliveries on V-Guide rollers in both standard and custom sizes.

4" to 10" Diameter
